End-To-End Encryption

Without end-to-end encryption the contents of messages are easily exposed to your email provider and to mass surveillance. To send encrypted or digitally signed messages, you need to configure an encryption technology, either OpenPGP or S/MIME. Select your personal key to enable the use of OpenPGP, or your personal certificate to enable the use of S/MIME. For a personal key or certificate you own the corresponding secret key.[Learn more](#)

OpenPGP

Thunderbird found 1 personal OpenPGP key associated with arinzchukwemeka12@gmail.com

✔ Your current configuration uses key ID 0x5D42D70F1E64DA5B [Learn more](#)

Add Key...

☐ None

Do not use OpenPGP for this identity.

☒ 0x5D42D70F1E64DA5B

Expires on: 7/28/2030

Publishing the public key on a keyserver allows others to discover it. 

Publish

Use the OpenPGP Key Manager to view and manage public keys of your correspondents and all other keys not listed above.
